

Door Edge Guards Installation

Scorpion Door Edge Guards are a Paint Protection Film designed to prevent damage to the door edges such as chips, dings, and scratches from normal wear and tear. By using our Door Edge Guards, you are helping to maintain the value of your vehicle by preventing rust and corrosion to form along the edges of your car door.

Easy to follow steps for installation:

- Clean the door edge with the included alcohol wipes. Note: One alcohol wipe will clean all the door edges on a single car.
- Measure the length of the door edge and cut the film to equal length to protect the paintwork on the edge of the door.
- Center the door edge film and apply the strip of film along the edge of the door. Keep the film exposed until you are ready to wrap it around the door.
- Once the film is applied to the outer edge of the door, wrap the edge of the film around the inside of the door and ensure the film has completely adhered.
- Once you complete step 4, double check the door edge again to ensure that the film is completely adhered to the door.
